1. Create an online application form to get the user input for a Job vacancy such as personal information, educational background and experience or skillset and Display the user data to a textarea.

Write a pattern that matches e-mail addresses.

`[A-Z0-9a-z._]+@[A-Za-z0-9._]+\.[A-Za-z]+`

The personal information part contains the following ASCII characters.

- Uppercase (A-Z) and lowercase (a-z) English letters.
- Digits (0-9).
- Characters ! # \$ % & ' * + - / = ? ^ _ ` { | } ~
- Character . (period, dot or full stop) provided that it is not the first or last character and it will not come one after the other.

`[A-Za-z0-9!#$%&'*/+./=?^_`{|}~](\.[A-Za-z0-9!#$%&'*/+./=?^_`{|}~])*`

```
<!DOCTYPE html>
<head>
  <title>Job application</title>
  <style type="text/css">
    body{
      font-family: Verdana;
      background-color: rgba(209, 239, 243, 1);
    }
    #FORM{
      width: 80%;
      margin: auto;
      font-size: 1.2em;
    }
    #textarea{
      margin-left: 10%;
    }
  </style>
</head>
<body>

            for(x in date){
                date[x] = parseInt(date[x]);
            }
            var isdate = false;
            if (date[1] == 1 || date[1] == 3 || date[1] == 5 || date[1] == 7 ||
date[1] == 8 || date[1] == 10 || date[1] == 11){
                if (date[0]<32)
                    isdate = true;
            }
            else if(date[1] == 2){
                if ((date[2]%4==0 && date[0]==29) ||
(date[2]%4!=0 && date[0]==28))
                    isdate=true;
            }
            else if(date[1]<31)
                isdate=true;

            if(isdate)
                msg = "String contains date:
"+date[0]+"-"+date[1]+"-"+date[2];
        }
        document.getElementById('msg').innerHTML = msg;
    }
}

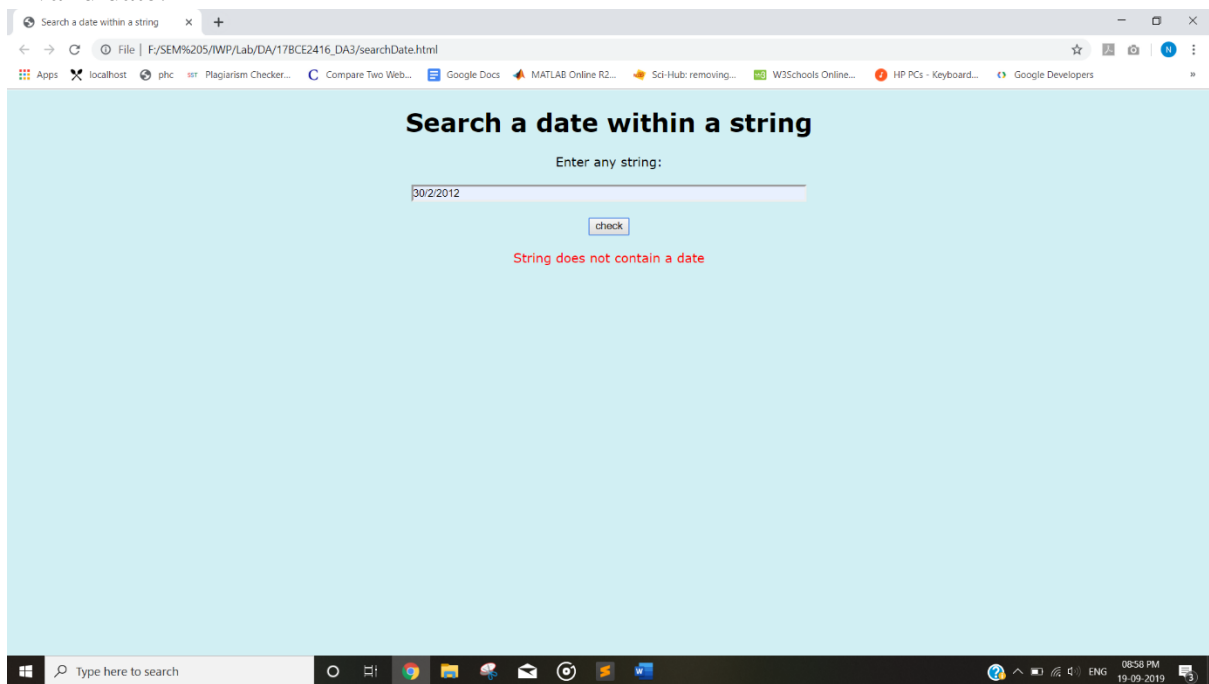

</script>
</body>
</html>

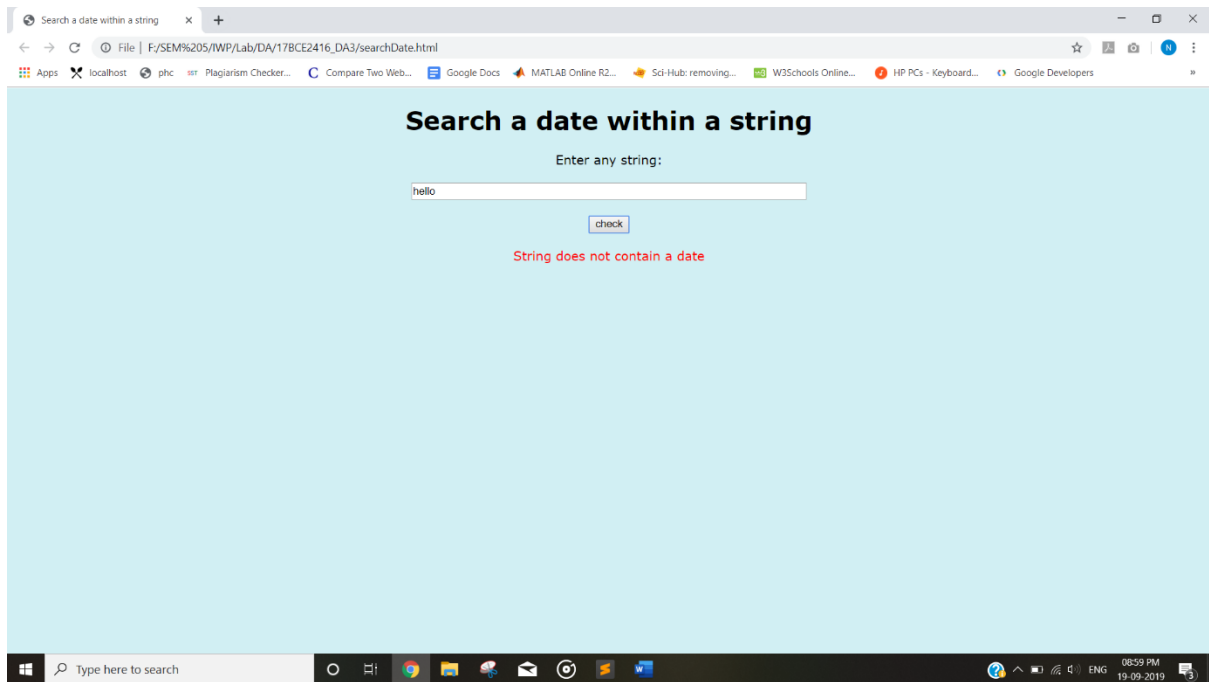

```

Invalid date:

5. Write a JavaScript function that creates a table, accept row, column numbers from the user, and input row-column number as content (e.g. Row-0 Column-0) of a cell.

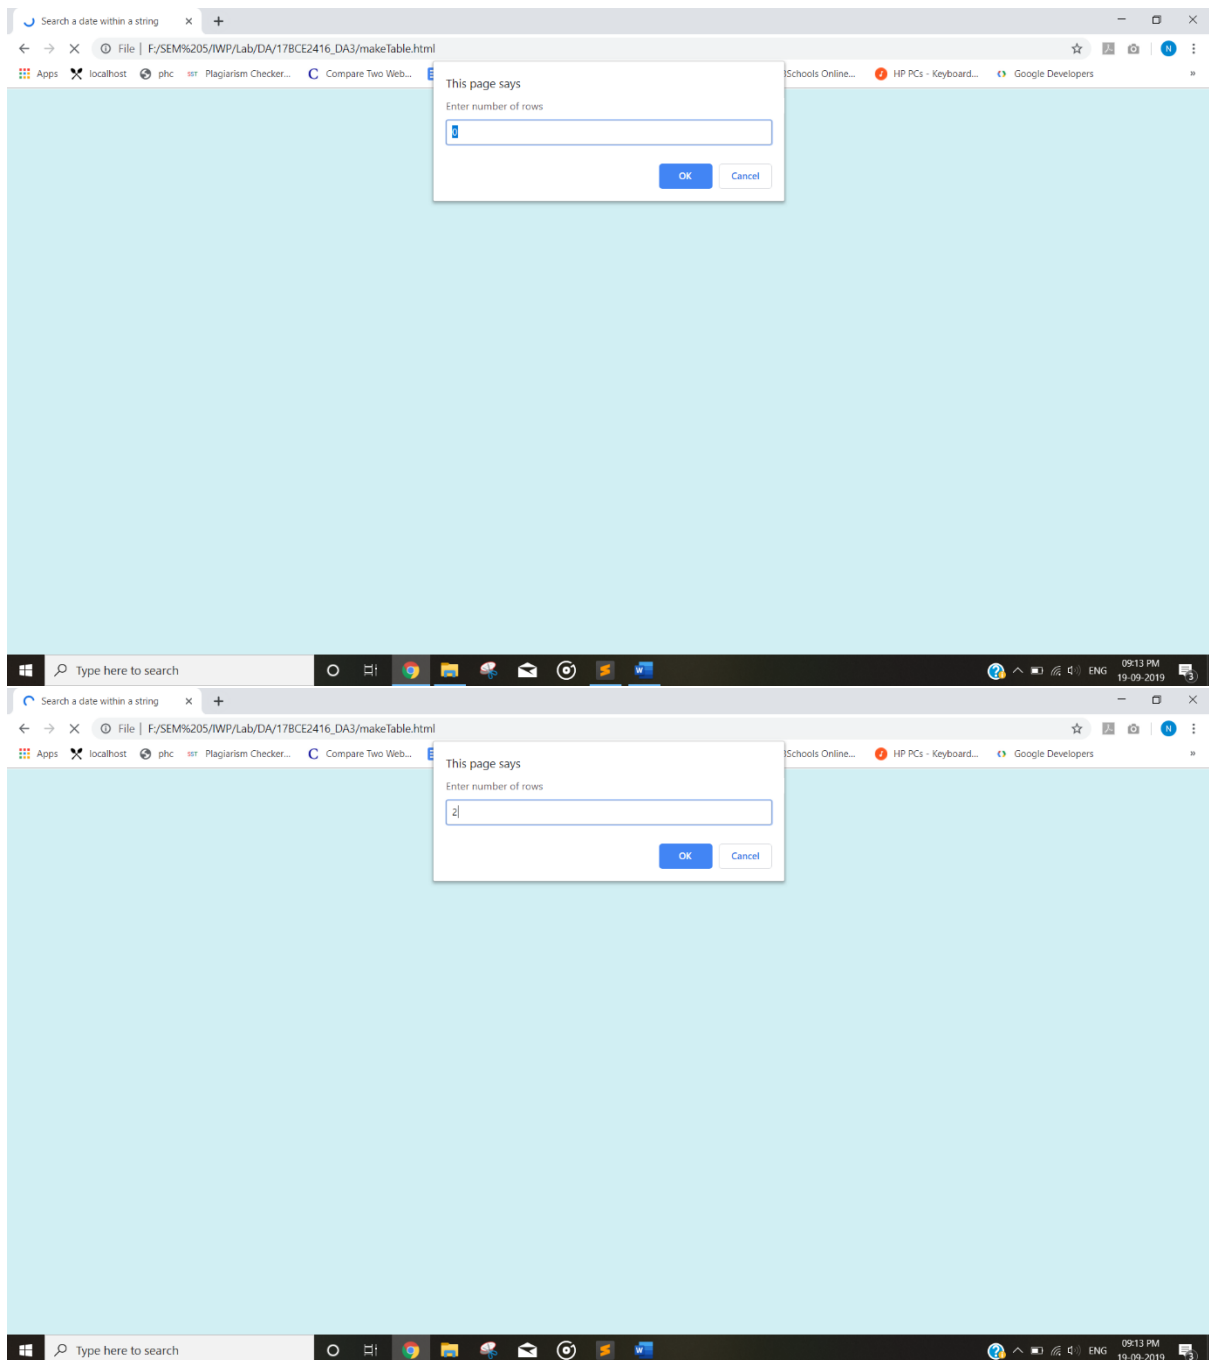

```
<!DOCTYPE html>
<head>
  <title>Search a date within a string</title>
  <style type="text/css">
    body{
      font-family: Verdana;
      background-color: rgba(209, 239, 243, 1);
      text-align: center;
    }
    table{
      margin: auto;
      border-collapse: collapse;
    }
    td{
      padding: 10px;
      border: 1px solid black;
    }
  </style>
</head>
<body>
  <h1>Create table</h1>
  <div id="tab">
    </div>

  <script type="text/javascript">
    var rows = prompt('Enter number of rows', 0);
    var cols = prompt('Enter number of columns', 0);
    var tab = "<table>";
```

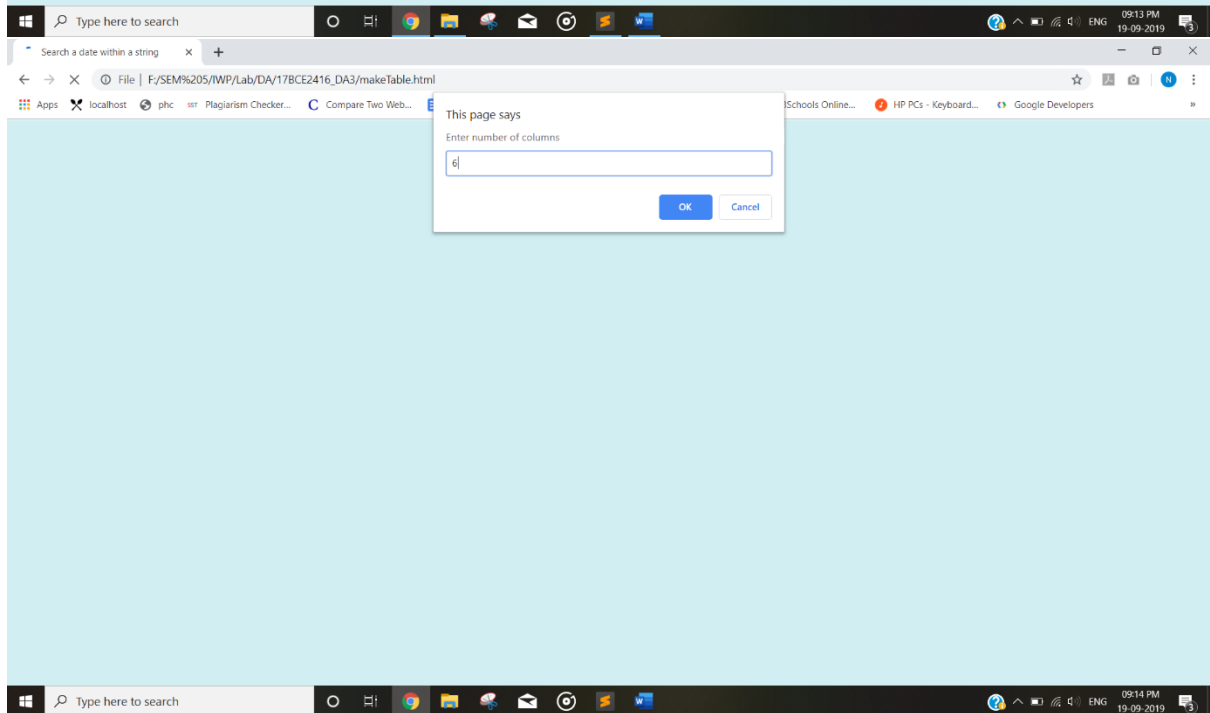

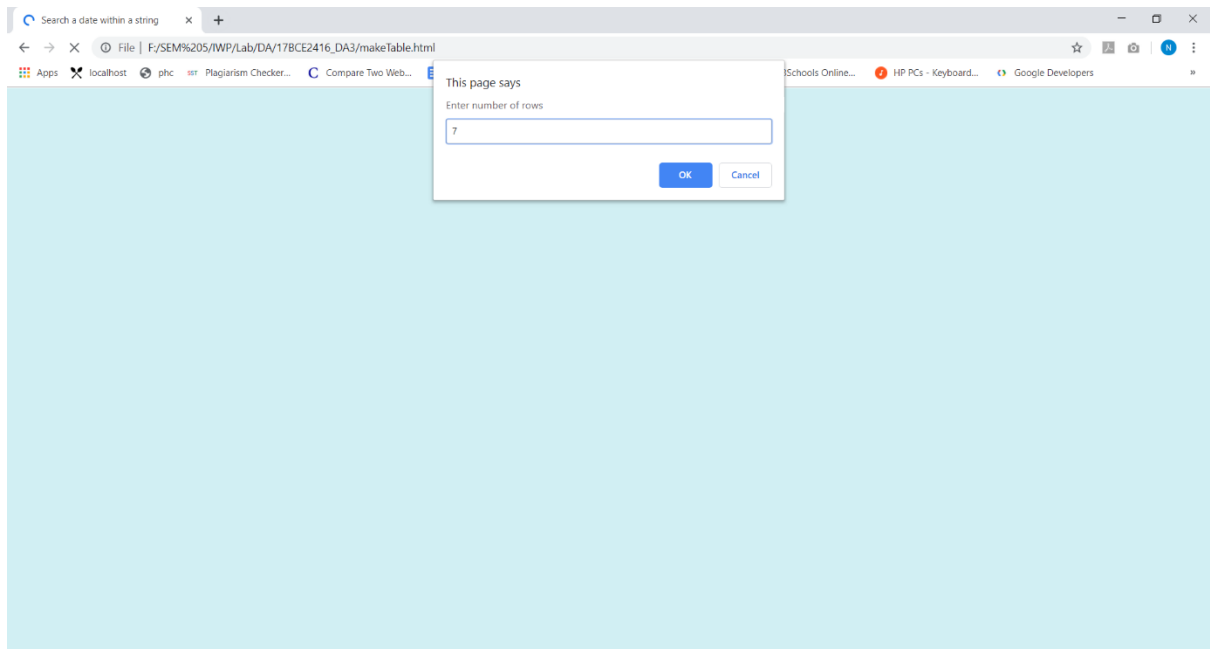

```

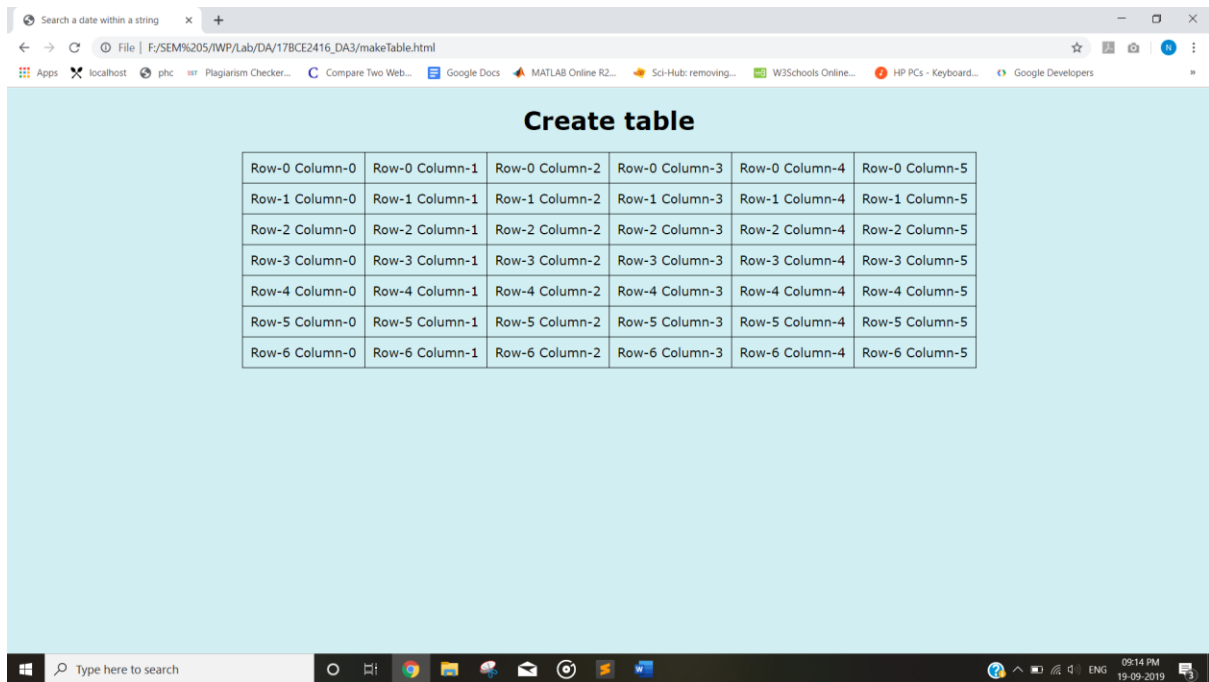

for(var i=0; i<rows; i++){
    tab+="

```

6. Write a JavaScript function to test whether a date is a weekend and to get the last day of a month.

To check if a date is a weekend:

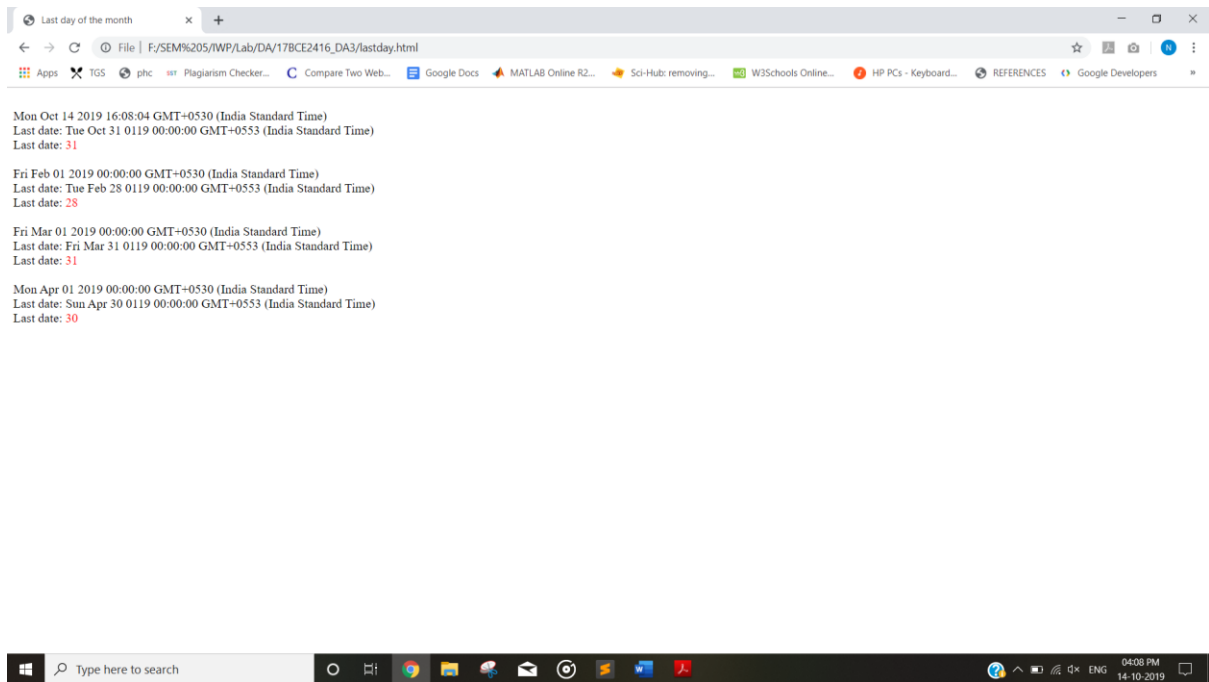

```
<!DOCTYPE html>
<html>
<head>
  <title>Check if a date is a weekend</title>
</head>
<body>
  <script type="text/javascript">
    function isSatSun(dt){
      if(dt.getDay() == 0 || dt.getDay() == 6)
        document.write(dt+" <span style='color:red;'>is a weekend</span><br><br>");
      else
        document.write(dt+" <span style='color:red;'>is not a weekend</span><br><br>");
    }

    isSatSun(new Date());
    isSatSun(new Date(2019, 9, 11));
    isSatSun(new Date(2019, 9, 12));
    isSatSun(new Date(2019, 9, 13));
  </script>
</body>
</html>
```

To get the last day of the month:

```
<!DOCTYPE html>
<html>
<head>
    <title>Last day of the month</title>
</head>
<body>
    <script type="text/javascript">
        function lastDay(dt){
            document.write('<br>'+dt);
            var month = dt.getMonth();
            var year = dt.getYear();
            var lastD = new Date(year, month+1, 0);
            document.write('<br>Last date: '+lastD);
            document.write('<br>Last date: <span
style="color:red;">'+lastD.getDate()+</span><br>');
        }
        lastDay(new Date());
        lastDay(new Date(2019, 1));
        lastDay(new Date(2019, 2));
        lastDay(new Date(2019, 3));
    </script>
</body>
</html>
```

7. Write a JavaScript function to get English ordinal suffix for the day of the month, 2 characters (st, nd, rd or th).

```
<!DOCTYPE html>
<html>
<head>
  <title>English Ordinal Suffix of the Day of the Month</title>
</head>
<body>
  <script type="text/javascript">
    function suffix(dt)
    {
      document.write('<br>'+dt);
      var result;
      var date = dt.getDate();

      if(date % 10 == 1 && date != 11 )
        result = 'st';
      else if(date % 10 == 2 && date != 12)
        result = 'nd';
      else if(date % 10 == 3 && date != 13)
        result = 'rd';
      else
        result = 'th';

      document.write('<br>English ordinal suffix: <span
style="color:red;">'+date+result+'</span><br>');
    }

    suffix(new Date());
    suffix(new Date(2019, 9, 1));
```

```
suffix(new Date(2019, 9, 2));  
suffix(new Date(2019, 9, 3));  
suffix(new Date(2019, 9, 11));  
suffix(new Date(2019, 9, 12));  
suffix(new Date(2019, 9, 13));  
suffix(new Date(2019, 9, 4));
```

```
</script>
```

```
</body>
```

```
</html>
```
